Facilities to reduce CMN/ZMF's resource consumption and enhance its overall performance

ChangeMan ZMF is a very rich product and can be customized in many ways. Which is what many (if not all ...) ChangeMan ZMF customers have done. However, ChangeMan ZMF also *has some challenges* as it relates to:

- Reduction of ChangeMan ZMF's resource consumption (don't expect your MIPS to go down by introducing ChangeMan ZMF ...).
- Various performance issues which may be enhanced (sometimes even with some minor customizations that should be part of the base ChangeMan ZMF product).
- Keeping a ChangeMan ZMF environment in good shape (as years go by, there are quite a few ChangeMan ZMF maintenance activities that should be performed, at least so now and then, if not on a regular basis).

The TuneUps category therefor covers topics to reduce ChangeMan ZMF's resource consumption and enhance its overall performance.

Below is a list of all available topics (Z-Issues) that fit into this category, with more upcoming topics in this category mentioned in the Z-Factory roadmap.

If you have other topics that you think fit into this category, please let us know!
