Applicable ChangeMan ZMF: Any ChangeMan ZMF release

Sometimes you need to recall a (huge number of) libraries, which fit a certain DSN pattern.

You're lucky if these DSNs (by accident) are just any of these:

- the staging libraries for a specific package
- all baseline 0 libs from 1, or all applications

Because in those cases you could consider using the trick described in Recall all baseline 0 libs or pkg staging libs to easily trigger these recalls via ChangeMan ZMF.

If you're not so lucky, you should consider facilitating this process, e.g. using the approach to address this issue as documented in the Z-Clues (login required).
