

Each XML service is assigned a color (green, yellow or red). Some details about each of those colors:

- About the **green** XML services (there are 169 of them in CMN 5.5.2):
 - Allowed for anybody
 - No password protection
- About the **yellow** XML services (there are 219 of them in CMN 5.5.2):
 - Allowed after certification (cfr. manuals)
 - Access via XMLSERV is protected (only) by a password
 - No protection if used outside XMLSERV (you name it, you got it ...)
- About the **red** XML services (there are 68 of them in CMN 5.5.2):
 - Only allowed by SERENA - developers and - consultants
 - Access via XMLSERV is protected (only) by a password
 - No protection if used outside XMLSERV (you name it, you got it ...)

Major challenge: “Where (and how) to get started with the XML services”? When we first started using these XML services (back in 2003 using ChangeMan ZMF 5.3.x when the XML services were still a bit buggy, incomplete and without a lot of documentation ...), we spend about 4 man-months to figure out how to get some basic (green) XML services to work (like checkout, checkin, build, freeze, promote and approve).

SERENA recommends you attend a 2 days training class about green and yellow XML services, after which you'll be officially certified by SERENA for using green and yellow XML services. We at Dr.Chgman.com have attended these classes, so yes we are certified by SERENA to use the XML services! And this already back in sept 2004 (when these training classes first became available). And yes it is a good starting point for getting up to speed in using XML services in ChangeMan ZMF, but ... there is so much more to know, explore and learn about ChangeMan ZMF's XML services (not to speak about various missing features in XML).

That's why we have come up with a set of additional training classes about using XML in ChangeMan ZMF. For more details on this, please checkout any of the topics below:
